

Single Mode Pigtails

Telecoms Centre Pigtails are used for easily and efficiently creating connections for fibre cables. They are ideally used with fusion splicers but are also compatible with mechanical splices. Pigtail are available in 1m and 2m length of 900um tight buffered fibre with a high quality factory terminated connector at one end. Standard colour for the buffer is white or yellow. Connectors supplied as standard are SC and LC in either UPC or APC connector end polish. Supplied in quantities of 12.

All pigtails are 100% tested and supplied in environmentally friendly packaging with a test certificate. Through our stringent manufacturing process, our pigtails have a maximum expected insertion loss that should not exceed 0.3dB and will typically be lower than this. Our pigtails are also subject to tension, vibration and impact tests to ensure reliability.

Optical Parameter	Specification
